A series of horticulture insights

Did you know?

Anemones are not related to the sea, but are a close relative to buttercups.

Overview

- They are also known as the windflower.
- There are approximately 200 species of anemones.
- They have a cup-shaped flower and come in various colors of red, pink, blue, yellow, purple and white.
- Anemone's blooms open during the day and close at night.
- They have potential to be poisonous for both humans and animals.

Production

They are herbaceous perennials that grow from a bulb that is traditionally planted in the fall.

They require well-drained soil.

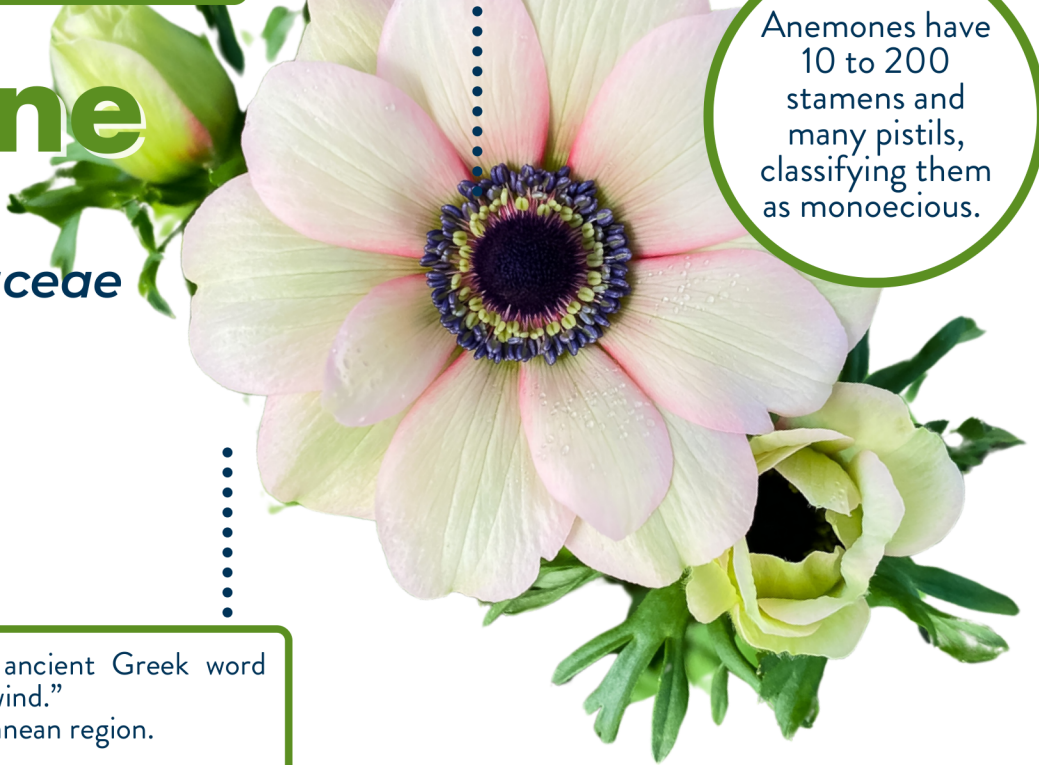

Anemones have 10 to 200 stamens and many pistils, classifying them as monoecious.

Anemone

Kingdom: *Plantae*
