A series of horticulture insights

Did you know?

The Black-eyed Susan is the state flower of Maryland since 1918.

Overview

- The Black-eyed Susan gets its name from its black center, or “eye.”
- Stems and leaves are covered with hairs and can grow up to 3 feet tall.
- They can be an annual, biennial or short-lived perennial plant.
- Their blooms can be shades of yellow, red or orange.
- When cut, Black-eyed Susans can live in a vase for six to 10 days.

Production

They can spread by self-seeding which can result in overtaking nearby flowers and plants.

They grow best in full sun but can tolerate partial shade. They prefer average, well-drained soils.

The Black-eyed Susan represents encouragement and is a popular choice for cut flowers.

Black-eyed Susan

Kingdom: *Plantae*

Family: *Asteraceae*

Genus: *Rudbeckia; L.*

History

- Black-eyed Susan are native to the United States.
- The Native Americans used the plant to wash sores and swellings, as a poultice for snake bites and for treating worms and colds in children.
- Linnaeus gave them the Latin name *Rudbeckia Hirta* after his mentor Olaf Rudbeck and *hirta* meaning rough, hairy.
