Life Cycle APPLE

Apple Apple with Seeds

Seeds can be planted to grow more apple trees.

Seed

Every apple tree starts as a seed. It contains growth nutrients.

Germination

The seed begins to grow roots which also act as anchors.

Fruit

The edible part that comes from the blossom (flower) that contains seeds of the plant.

Sprout

What starts to develop as the plant germinates.

Blossom

The blossom/flower attracts pollinators and develops the fruit.

Tree

The tall woody plant that grows from a seedling.

Seedling

The stem and beginning of leaf growth.
